PURPOSE

Why would someone choose to do business with us?

Or, conversely, why would someone choose not to do business with us?

"People do not buy what you do, they buy why you do it." - Simon Sinek

In business, people tend not to ask why because they assume they know the answer or they should know the answer. Instead of asking or clarifying why, most people make decisions based on what they think they know. Which is a mistake. So, why does The Howell Group exist?

Our purpose is to deliver our client's mission through the development of people-centric teams and companies devoted to this purpose. We continually ask ourselves; what does it take to ensure a successful implementation of our client's mission? Is it technology? Is it a procedural set of processes? Is it a group of people and companies with passion and integrity? The answer is yes! Yes to every one of those questions. But there is more, and through many years of implementing different technologies and different contractual process on every type of project possible we have learned by asking questions, listening to the answers and observing behavior.

This requires us to rely on our ability to be intuitive, to recognize problems and successes, to understand people and to create specific solutions. These ideas not only need to be functional, but must also connect on an emotional level because we genuinely care about every person with which we come in contact.

"The complacent company is a dead company. Success today requires the ability and drive to constantly rethink, reinvigorate, react and reinvent." - Bill Gates

Only companies that act like commodities are the ones who wake up every morning with the challenge of how to differentiate themselves. We have a clear sense of our purpose and therefore, we do not think of ourselves as being like everyone else. We are not concerned about how we compare to anyone else because we do not see it as a competition. We also understand that real achievement does not happen overnight, which is why we are simply and obsessively focused on being better than we were yesterday.

PEOPLE

The key to realize one's full potential is working in a superior organization. An organization that aims to become a single team in which each member acts beyond their own areas of responsibilities to cover for others.

"Genuinely care for others. Show you care. Respect the dignity of every person and every role. Treat everyone with respect, especially those who cannot do anything for you." - Colin Powell

It is absolutely necessary we are genuine, where each of us is responsible for demonstrating our purpose to the outside world in whatever we say and do. Why? Because everything we say and do is reflection of who we are.

"The moment there is suspicion about a person's motives, everything they do becomes tainted." - Gandhi

What should you expect from The Howell Group? As an organization of individuals, is it fair and reasonable to expect we operate in an ethical manner? If the answer is not a resounding yes, then we should take another look at who we are and why we are doing this.

Only through mutual trust can an organization become great. We must be open and honest with ourselves and each other.

"To know what is right and not do it is the worst cowardice." - Confucius

"It is amazing what you can accomplish if you do not care who gets the credit." - Harry S. Truman

Experience

Marc has over 36 years of diversified planning, programming, design and construction experience, including more than 50 healthcare projects, both acute care and behavioral health, with budgets ranging from $50 thousand to $920 million. He has performed various duties as a Design Manager, Coordinator, Project Manager, Construction Manager, Project Director / Executive, and Vice President. He has spent the last 10 years as an Owner's Representative responsible for the planning, design, coordination, and management of a variety of renovations and new construction projects for both private and public entities.

Marc has extensive experience creating, managing, and delivering projects utilizing multiple delivery methods, including design-bid-build, design-build, progressive design-build, and construction management at risk (CMAR).

Significant Projects

Client & Project	Location	Value
LA Downtown Medical Center – 5th Floor BHU Remodel	Los Angeles, CA	$10.8M
LA Downtown Medical Center – 6 & 7th Floor BHU Remodel	Los Angeles, CA	$24M
LA Downtown Medical Center – Fire Sprinkler Upgrades	Los Angeles, CA	$5.5M
LA Downtown Medical Center – Emergency Generator Replacement	Los Angeles, CA	$8.5M
LA Downtown Medical Center – Elevators 1-5 Modernization	Los Angeles, CA	$2.9M

PEOPLE

Projects / Experience:

Los Angeles Downtown Medical Center. Planning / Program Management to develop and mange the overall campus program of the following projects.

⇒ $10.8 million dollar remodel of the 5th Floor BHU

⇒ $24 million dollar remodel of the 6th and 7th Floor BHU

⇒ $5.5 million dollar fire sprinkler upgrade

⇒ $8.5 million dollar emergency generator upgrade

⇒ $ 2.9 million dollar elevators 4 & 5 replacement

⇒ $1.7 million dollar elevators 1-3 replacement

⇒ $393 thousand dollar seismic retrofit (Rosemead—Ingleside Campus)

⇒ $48 million BHU addition (West Covina Medical Center Campus)

Carl Zeiss Meditec. Planning / Program Management to develop capital expenditures, budgeting, standardized master and supplemental agreements. Construction Manager of various projects:

⇒ $25,000 As-built survey of existing facility

⇒ $1 million dollar design-bid-build replacement of existing process chiller system

⇒ $400,000 design-bid-build flammable chemical storage remodel

⇒ $350,000 design-bid-build cold storage remodel

⇒ $500,000 design-bid-build lab remodel for dehumidification

Western University of Health Sciences. Onsite Project Management for the general contractor of 6,000 square foot design-build operating room simulation lab remodel.

KPC Healthcare. Planning / Program Management to develop $50 million capital expenditures, budgeting, standardized master and supplemental agreements for various projects on seven (7) campuses. Onsite Construction Manager of the following various projects:

⇒ Global Orange County Medical Center; $1.35 million remodel eight (8) existing operating rooms and one (1) C-section room

⇒ Global Orange County Medical Center; $12 million replacement and upgrade of the existing central plant

⇒ Global Chapman Medical Center; $450,000 remodel three (3) existing operating rooms

⇒ Global South Coast Medical Center; $750,000 remodel five (5) existing operating rooms

Projects / Experience:

Aliso Viejo Behavioral Health. Project Executive of a $50 million design-bid-build ground up psychiatric hospital project. 80,000 square foot 2-story building and associated site improvements.

Anaheim Community Hospital. Project Executive of a $30 million design-bid-build remodel / renovation project consisting of an existing 64,000 square foot acute care hospital conversion into a psychiatric hospital.

Tri-City Medical Center, Capital Program. Senior Construction Manager—Program Executive of various design-build projects on an existing / active campus, including;

⇒ New 290-stall surface parking lot, new 500-stall 4-story parking structure and main entry drive.

⇒ Developed, instituted and managed the selection process of a design-build entity for a $255 million campus redevelopment project consisting of relocation of the loading dock, materials management and morgue. Addition of a new 4-story acute care tower with rooftop helipad, emergency department, orthopedics, ICU, patient rooms and shell space. Expansion of the central utility plant, new main entrance to the hospital and pedestrian bridges connecting the new acute care tower to the parking structure and existing medical office building.

Hoag Hospital Irvine, Emergency Department Expansion. Senior Construction Manager of a design-build / CM multi-prime $16.5 million total project budget with $11 million construction budget. 17,000 total square foot consisting of 13,500 of new construction and 3,500 remodel of the existing emergency department.

Hoag Hospital Irvine, Chiller Plant Replacement. Senior Project Manager of a design-build / CMAR $3.2 million total project budget with $2.7 million construction budget. 1,300 total square foot remodel of the existing central utility chiller plant.

St. Joseph Health System, St. Jude Medical Center Northwest Tower. Design Manager of a design-build $380 million total project budget with $270 million construction budget. 217,000 total square foot consisting of 200,000 4-story new acute care tower and 17,000 new central utility plant.

Kaiser Permanente, Downey Medical Center. Design Manager of a $515 million total project budget with $365 million construction budget. 708,000 total project square foot of a new multi-building construction on a 33-acre site. This project was originally developed as a design-bid-build and was converted to design-build for M.E.P. systems.

Los Angeles County, USC Medical Center. Project Manager of a design-bid-build $920 million total project budget with $650 million construction budget. 1,500,000 total square foot of a new multi-building construction consisting of a 7-story 325,000 square foot outpatient building, a 5-story 430,000 square foot base-isolated diagnostic and treatment building an 8-story 690,000 square foot inpatient building and 1-story underground 55,000 square foot central utility plant. This project was delivered as a tri-venture general contractor.

Eric Laurin

- NelsonHPS
- Western University of Health Sciences
- Watch Hill Capital / Signature Health
- Hoag Hospital
- Tri-City Medical Center
- St. Joseph Health System
- St. Mary's Medical Center
- Edwards Lifesciences

Experience

Eric has over 26 years of experience in the A/E/C industry from concept to close out. Projects ranging from commercial, hospitality, advanced technology, and a special focus on healthcare. He has spent the last ten years managing projects for developers; the last seven of which have been as an Owner's Representative.

Eric's success in construction is rooted in his passion and our client's success. "What we build changes lives for the better." His hands-on experience with all phases of the design and construction process, faith in teamwork, and strength creating structure and function for various needs provide uncommon and cumulative benefit to each project and team.

Eric has a genuine love of what we do, why we do it, and the experience to provide it. Solutions to client challenges are related to outside the box thinking, then the structure to work within it. All efforts are considered in light of the larger picture.

While managing complex projects from triage to close out, Eric also leads our project financial tracking application and client technology integration.

Valley Presbyterian Hospital, Multiple Projects. Construction Manager / Owner's Representative of a $32 million, 113,000 square foot program consisting of;

- Perioperative suite upgrades
- Electrical, mechanical and IT infrastructure upgrades
- Kitchen equipment and remodel
- Business offices
- CT suite replacement
- Catheterization lab replacement
- Sterile process hospital wide compliance
- Equipment replacements

St. Mary's Medical Center, Radiology Upgrade. Project Manager of a $1.2 million design-build renovation project. 3,000 square foot remodel of existing radiology department, including CT and two x-ray machines.

Hoag Hospital Newport Beach, Advanced Technology Pavilion. Project Manager of $2.7 million design-build renovation and build-out of existing 7,300 square foot stand-alone campus building.

Edwards Life Science, Tenant Improvement—Façade and Seismic Renovation. Project Manager of $1.7 million and $2.2 million design-bid-build projects. Concurrent seismic upgrade, TI and replacement of building's façade.

Brett Smith

M + 1 909 758 1976
brett@thehowellgroup.co

Corona, CA

Clients Represented

- LADMC
- Zeiss
- National CORE
- Great Scott

Experience

Brett has over 7 years of construction project oversight with a focus on medical, commercial, and multifamily construction. During this time, he has developed his expertise in delivering complex projects from pre-construction through completion while keeping stakeholder's expectations and interests at heart.

Brett's passion for construction is driven by the opportunity to create lasting, tangible spaces that impact people's lives and contribute to the growth and development of communities. Whether it's a hospital that saves lives, an office space that fosters innovation, or a multifamily building that provides an inviting home to families.

At the heart of it all, He is driven by the ability to leave a lasting impact. Each project is a piece of the built environment that will continue to serve people for decades. The knowledge that He has contributed to shaping the spaces where people work, live, and heal is what fuels his ongoing dedication to the craft of construction.

PROCESSES

Typically, the overall life-cycle process of a project is dysfunctional via silos and poor communication, which leads to adversarial relationships. Over the last ten years, while the design and construction industries have made a number of improvements, they have been slow to adopt new technologies and processes. Regardless of the stage or phase of a project, we develop and implement a specific and unified process throughout.

What if each of these processes could be improved by 1%-5%?

Questions to consider:

⇒ Who is responsible for the overall project from beginning to end?

⇒ Are the right people in the right positions?

⇒ Are the right people making the right decisions?

⇒ Do the right people have the necessary information to make the right decisions?

⇒ Are the current processes efficient and effective?

⇒ How is communication achieved between all of the various parties?

⇒ What are the "known" and "unknown" interests / motivations of each group?

⇒ What are the defined objectives and expectations of each group?

Does everyone know?

Does everyone agree?

DBIA Best Practices:

Critical questions for establishing a project strategy

1. What is the most important project objective?
2. What is the biggest project concern / challenge?
3. Efficient involvement of key stakeholders (e.g., ultimate users)?
4. Ability to delegate authority to make final decisions promptly?
5. Rules governing procurement?
6. Owner's dominant personality and culture?

PROCESSES

We know what does not work. Market survey results indicate the following predominant issues in the global design and construction industries;

⇒ (31%) lack of teamwork, integration, collaboration, communication and poor processes.

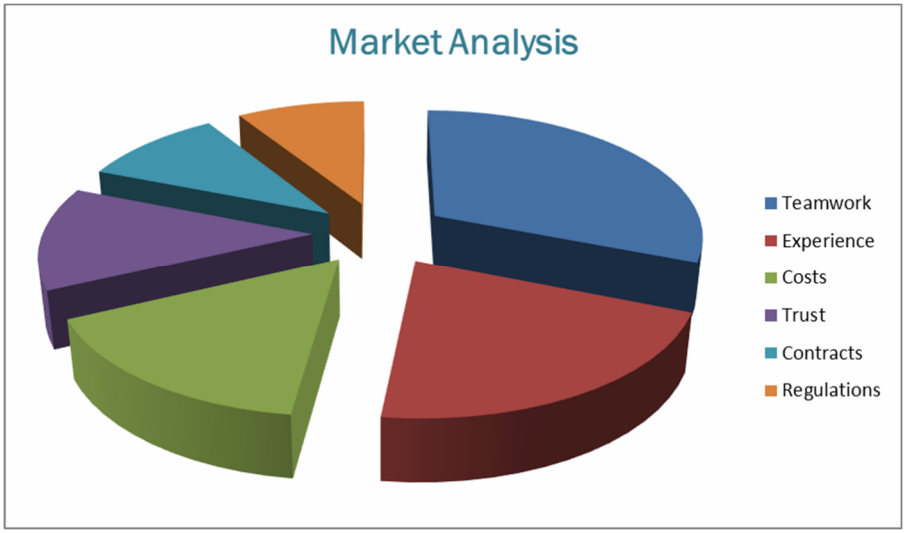

⇒ (21%) lack of trained or experienced workforces, including management and a reliance on technology.

⇒ (16%) competitive or low bid process, timely payment and a focus on cost.

⇒ (13%) lack of trust, integrity, honesty and responsibility.

⇒ (10%) adversarial contracts and unrealistic expectations.

⇒ (9%) regulation and enforcement

As research illustrates, far too many people are not engaged in their employment. The design and construction industries have suffered for several years from the fragmentation of the standard tri-party relationship; owner / designer / contractor. This is due to a general lack of trust and has spawned a whole market of "specialists" promising a one-size-fits-all solution. None of which addresses the core behavior by asking, "What causes the most problems when attempting to develop a project and team?" We ask the questions and listen to the answers. We then work with our clients to create specific processes, solutions and integrated teams to address their strengths and weaknesses.

92% of individuals and organizations agree these types of services are essential to improve their current performance.

PROCESSES

An Owner's choice of project delivery system and procurement approach strongly influence project results. These choices are among the first decisions an Owner makes on a project, and they form the foundation of how the project will be developed, procured and executed, and how the key stakeholders communicate and relate to each other. In making these choices, it is critical for an Owner to consider the particulars and circumstances of each project, including the procurement options available to the Owner. After thoroughly considering these issues an Owner should make a strategic decision as to how to take full advantage of the many benefits that are inherent with each delivery system.

⇒ An Owner should conduct a proactive and objective assessment of the unique characteristics of its program / project and its organization before deciding on a particular delivery system.

⇒ An Owner should implement a procurement plan that enhances collaboration and other benefits of the delivery system and is in harmony with the reasons that the Owner chose the delivery system.

⇒ An Owner using a competitive procurement that seeks price and technical proposal should: establish clear evaluation and processes; ensure that the process is fair, open and transparent; and value both technical and price in the selection process.

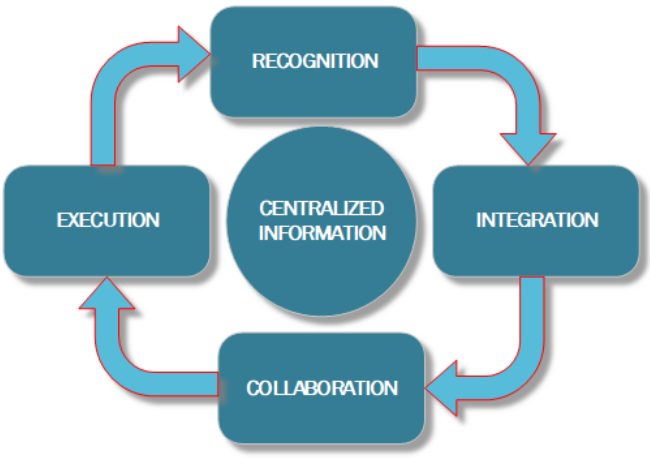

⇒ All team members should be educated and trained in the chosen delivery process and be knowledgeable of the differences between it and other delivery systems.

⇒ The project team should establish logistics and infrastructure to support the project delivery.

⇒ The project team, at the outset of the project, should establish processes to facilitate timely and effective communication, collaboration and issue resolution.

⇒ The project team should focus on the design management and commissioning / turnover process and ensure that there is alignment among the team as to how to execute these processes.

ISSUE RESOLUTION PROCESS

SERVICES

Program Management. Is the process of managing several related projects in a coordinated manner with oversight of, and focus on the client's purpose. A Program Manager uses this oversight to support project-level activity and to ensure the client's goals are met by providing decision-making capacity that cannot be achieved at an individual project level. Understanding how our clients work allows us to have insight into how decisions are made.

Being capable of looking at the bigger picture allows us to identify and describe a specific delivery method regarding how projects are delivered in a building or on a campus.

Design Management. Is the process of managing the development of a project's design. The objective of design management is to develop and maintain an efficient team in which it can achieve the project goals through design. Design Management is a comprehensive activity at all levels of the team, from discovery to execution with a focus on human-centered solutions.

Construction Management. Is a service that provides our clients with effective management of a project's scope, quality, schedule, cost, safety and function.

Regardless of which role we occupy, we represent the Owner's interest and provide oversight over the entire program or project directly for the Owner.

We are able to bring our extensive combined experience from many years of working at various organizations to create an environment encompassing all of the great things we have learned while maintaining a client-centric culture.

Our success is based on a defined scope of work and goals for the entire team, with a high level of constant communication and total collaboration. With a clearly defined cost model, our teams are consistently working towards the best interest of the project and not that of any individual.

We are committed to developing design and/or construction delivery teams that challenge the traditional methodologies, creating innovative structures that are cost effective and quality driven.

Our subject matter experts continuously analyze each project and make recommendations for consideration. All teams members (Designers, Contractors, Sub-contractors) are evaluated base on qualifications established as part of each project.

Allow us to deliver your mission.
